10K Takes - Daily Content Report

REPORTING DATE: THURSDAY, NOVEMBER 12, 2026

YESTERDAY AT A GLANCE

Unavailable	0	Not reported
All-account impressions	Posts published yesterday	Performance score
No complete account-wide daily source	Across 0 platforms with a saved snapshot	Incomplete cross-platform coverage

Activity window: Nov 12 12:00 a.m. to Nov 13 12:00 a.m., America/Chicago. Exact account-wide activity is unavailable. Platform totals are matched-post counter changes between daily captures; a brief collection delay may cross midnight. Posts published yesterday show their cumulative post totals at the next-morning capture. The 30-day publication feed does not include every older post.

Yesterday's executive diagnosis

A verified yesterday-only diagnosis is not available yet because matching post snapshots are missing. The report does not substitute lifetime counters or estimated account totals.

Yesterday's Performance Scorecard

Platform	Yesterday's impressions / views	Expected baseline*	Delta*	Yesterday's signals
Instagram	Not available	Not available	Not available	No matching post counters in both snapshots
Facebook	Not available	Not available	Not available	No matching post counters in both snapshots
TikTok	Not available	Not available	Not available	No matching post counters in both snapshots
X/Twitter	Not available	Not available	Not available	No matching post counters in both snapshots
YouTube	Not available	Not available	Not available	No matching post counters in both snapshots
Threads	Not available	Not available	Not available	No matching post counters in both snapshots

*Historical comparators are platform-specific medians of daily changes in tracked-post counters and require at least 7 valid prior daily pairs. They are directional historical references, not forecasts. Views and impressions are not interchangeable. The table is not an all-account total.

Posts Published Yesterday

Post published yesterday	Yesterday's result	Yesterday's evidence & interpretation
No posts were verified as published during the reporting date.	Unavailable	Check publication timestamps and the saved midnight snapshots. Missing posts or metrics are not treated as zero.

Selected rows show a representative subset of verified posts, not every post. Views are distinct from impressions and are reported in their platform's units. Publication-date post totals are cumulative at the next-morning capture; daily platform totals are matched-post counter changes. Unavailable counters are not replaced with zero.

Three Actions For Today - Friday, November 13

1. Before repeating yesterday's creative, open its platform insights and record the reporting-window metrics; no publication-cohort counter delta is available yet.

2. Collect a complete daily snapshot series for at least 7 days before ranking platform performance; keep the first comparison within each platform.

3. Log post type, hook, topic, length, and any paid boost for each new post today so future recommendations can separate observed patterns from missing context.

Confidence & next data checks

High confidence: reporting-date boundaries and publication dates are assigned in America/Chicago. Moderate confidence: counter changes for posts present in both snapshots; platform API counters can arrive late. Historical comparisons are not available until at least 7 valid daily pairs exist. Low confidence: whole-account impressions, older posts outside the collector window, unsupported metrics, and causal explanations. 0 platform(s) had measurable tracked-post changes.

- One or both midnight snapshots are missing; daily activity cannot be measured yet.
- Collectors sample posts shortly after midnight. Reported changes are capture-to-capture deltas; counters may include a short collection delay around midnight.
- The post feed covers a limited recent-post set (up to each platform collector's API limit and roughly 30 days). It does not include older posts, so an all-post account impression total is unavailable.
- Views and X impressions are different platform measures and are compared only within their platform.
- Platform baselines require at least 7 valid historical daily comparisons; missing or stale days are not counted as zero.
